

Names of cranial nerves

- I Olfactory nerve
- II Optic nerve
- III Oculomotor nerve
- IV Trochlear nerve
- V Trigeminal nerve
- VI Abducent nerve
- VII Facial nerve
- VIII Vestibulocochlear nerve
- IX Glossopharyngeal nerve
- X Vagus nerve
- XI Accessory nerve
- XII Hypoglossal nerve

Classification of cranial nerves

- **Sensory cranial nerves:** contain only afferent (sensory) fibers
 - I Olfactory nerve
 - II Optic nerve
 - VIII Vestibulocochlear nerve
- **Motor cranial nerves:** contain only efferent (motor) fibers
 - III Oculomotor nerve
 - IV Trochlear nerve
 - VI Abducent nerve
 - XI Accessory nerve
 - XII Hypoglossal nerve
- **Mixed nerves:** contain both sensory and motor fibers---
 - V Trigeminal nerve,
 - VII Facial nerve,
 - IX Glossopharyngeal nerve
 - X Vagus nerve

Sensory cranial nerves

N.	Name	Function	Assessment
I	Olfactory	Smell	Examination of smell
II	optic	Vision	Acuity, field & fundus
VIII	Vestibular part	Equilibrium	Caloric and rotational chair
	Cochlear part	Hearing	Watch test, weber test

Motor cranial nerves

N.	Name	Function	Assessment
III	Oculomotor	Motor to superior, inferior and medial recti; inferior oblique & levator palpebrae superioris Parasympathetic to sphincter pupillae and ciliary muscle	Ptosis, pupil, eye movements & squint
IV	Trochlear	Motor to superior oblique	Look to opposite shoulder
VI	Abducent	Motor to lateral rectus	Lateral eye movement
XI	Accessory	Motor to sternocleidomastoid and trapezius	Elevation of shoulders and neck rotation
XII	Hypoglossal	Motor to muscles of tongue	Tongue movements

Mixed cranial nerves

N.	Name	Function	Assessment
V	Trigeminal	Muscles of mastication & sensations of face	Face sensations & power of muscles of mastication
VII	Facial	Muscles of facial expression & taste sensation in ant. 1/3 of tongue	Muscles of facial expression & taste sensation in ant. 1/3 of tongue
X	Vagus	Sensation and movements of Larynx, pharynx, thoracic and abdominal organs	Palatal and pharyngeal reflexes & movements of uvula
XII	Glossopharyngeal	Taste in post 2/3 of tongue & gen. sensation	Taste & general sensation and pharyngeal reflex

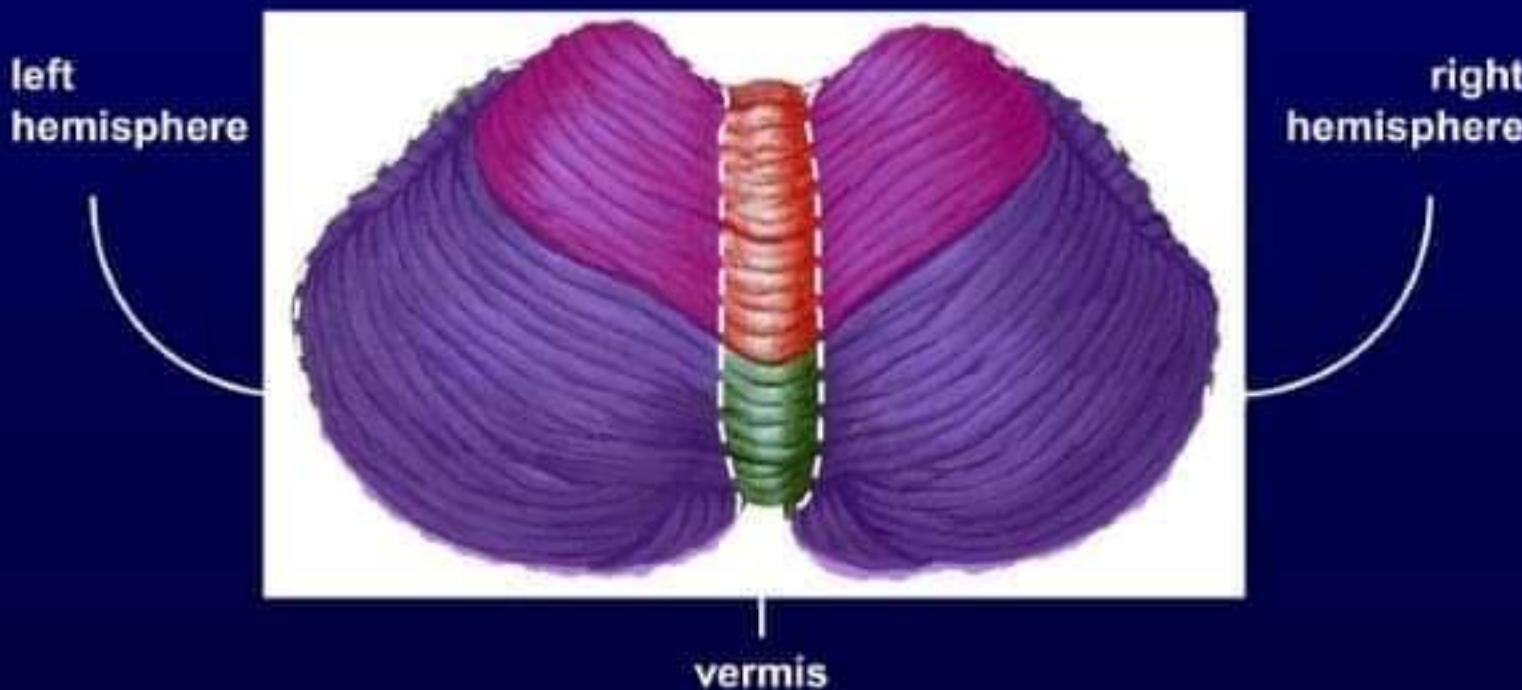

Cerebellum

- Behind the brain stem
- Formed of : medline vermis
two cerebellar hemispheres
- Composed of :
outer grey matter and inner
White matter

Spinal cord

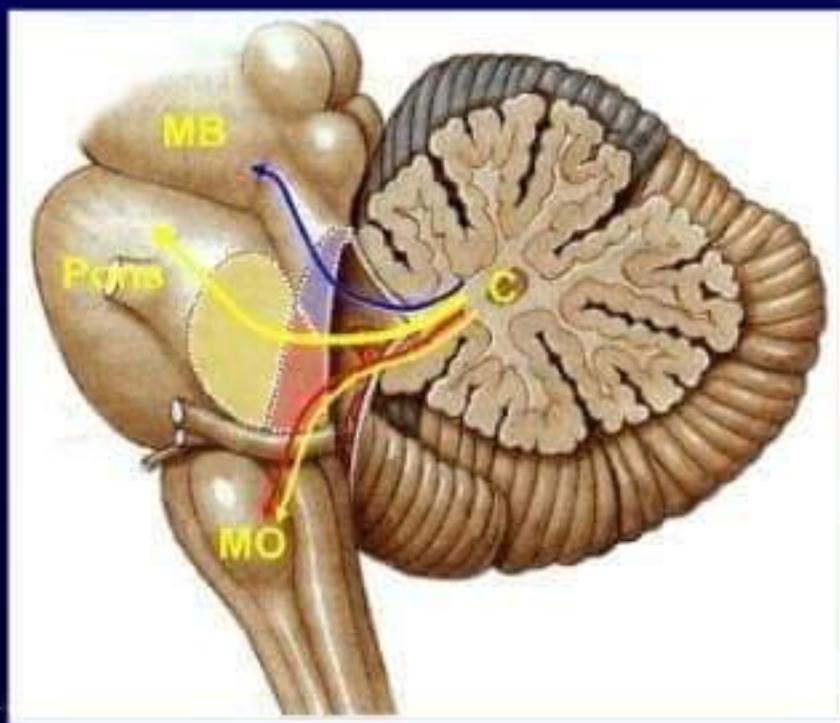

- Inside spinal canal
- End at lower border of L1
- The lowest 3 segments = **Conus**
- The above 4 segments = **Epiconus**
- Inner grey matter and outer white matter

Hemispheres and vermis

Cerebellar hemispheres are the two bilateral structures.
Vermis is the unpaired midline structure between
the two hemispheres.

Cerebellar peduncles

- v Superior peduncle connects cerebellum with midbrain.
- v Middle peduncle connects cerebellum with pons.
- v Inferior peduncle connects cerebellum with medulla oblongata

Cauda equina

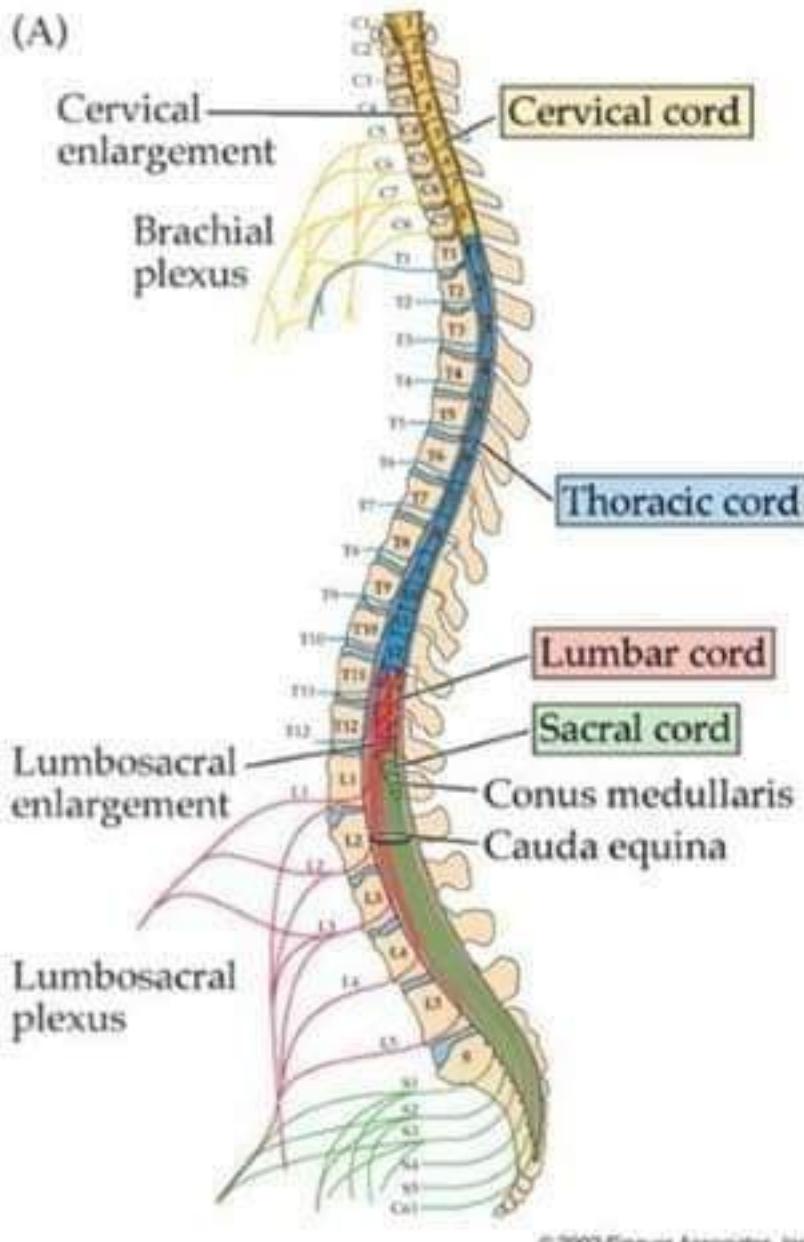

- Lumbosacral roots collection fills the lower part of the spinal canal bellow L1

WHAT IS NEUROLOGY?

Neurology is the branch of medicine that deals with diseases of the nervous system.

(A)

Cauda equina
Brachial plexus
Lumbosacral plexus
Cervical enlargement
Lumbosacral enlargement

CNS

Intracranial
part

part

- 1. Cerebrum
- 2. Brain stem
- 3. Cerebellum

Spinal cord &
Cauda equina

Peripheral nervous system

- A.H.Cs
- Roots
- Plexuses
- Peripheral nerves
